aviation data management

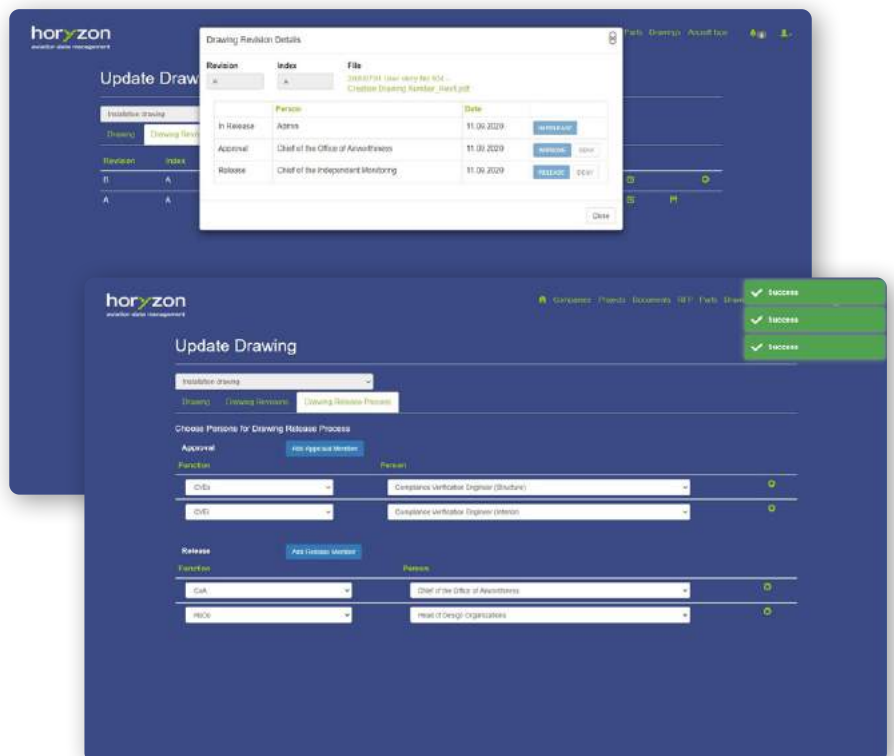

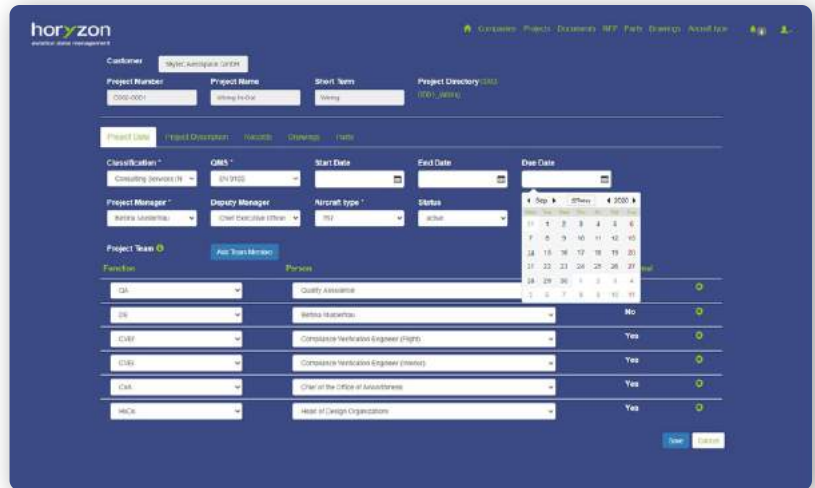

# WELCOME TO THE HOME OF AVIATION DATA MANAGEMENT

Horyzon is a specialized data management Software that supports Customer, Supplier and Project administration as well as comprehensive, Parts, Documentation and Drawing control and management features. All your sales activities can be managed thru the special RFP tool. With it's unique Modular structure, the Software can be customized to your individual needs and can be easily adapted to any industries, businesses and company structures.

Some Modules include aviation specific features that satisfy the regulatory requirements for EASA Design-, and Production Organizations. These revolutionary features are automating, your internal check-, release- and revision process for Changes and Repairs.

# FEATURES

## COMPANIES

The module “Companies” includes a comprehensive Customer and Supplier management. It allows you to create and manage Customers/Suppliers, to administrate Contact Persons and Addresses, assign specific Customer/Supplier numbers and many other features.

## PROJECTS

The „Projects“ module is a professional project administration tool. Projects are created with just one click and assigned to customers automatically. Assign individual roles and responsibilities within a project, manage your project milestones and due dates.

## DOCUMENTS

Standardized document management and control is essential for an effective project development. All necessary tools are included in the module “Documents”. You can create new documents within seconds, choosing from different customized templates and save them automatically in the selected project folders. The search and filter functionality ensures that any file can be found promptly.

The module also includes an aviation specific document release and revision process that conforms to the EASA Part 21 requirements for Design Organizations (DOAs). With this special feature, a fully automated document release and revision process is granted allowing you to speed up your processes.

## RFP (REQUEST FOR PROPOSAL)

Effectively manage all your sales activities, customer requests and proposals with the module „Request for Proposal (RFP)“. Assign responsible sales persons to RFPs, define due dates, sign & release the proposals and order confirmations directly within the tool.

## PARTS

Create and control Standard Parts, Single Parts, Assemblies and Kits. with this specific “Parts” module. Link parts to drawings and build up Assemblies or Kits automatically with this tool. It also covers a automated revision, configuration control and release process.

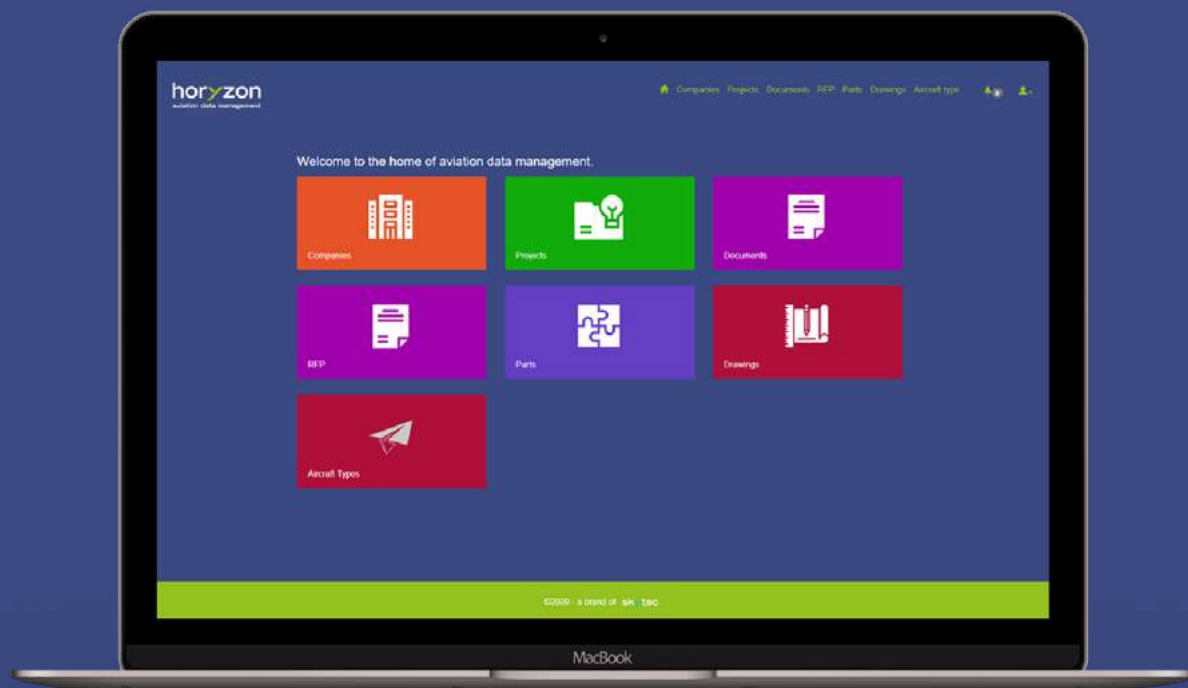

## DRAWINGS

The “Drawings” module, is a complete drawing administration tool providing full control over your design data. Create specific drawing types within specific projects and link them with parts. It also comprises a release and revision control protocol that satisfies the EASA Part 21 requirements for Design Organizations (DOAs) and Production Organizations (POAs).

## AIRCRAFT TYPES

The module “Aircraft Types” is developed specifically for Design Organizations (DOAs). It includes the administration of aircraft types inclusive definition of the Type Certification Basis that is used for Changes and Repairs.
